

Subject-Verb-Object Trigram Space as of June

wordnet does not work for this. distance metric
accuracy is poor and vocabulary size is abysmal.

fortunately thesaurus.com has left their API
responses in near-json format

Problem: Semantic search has proven terrible after
long run-times. Basically, the longer OSLO goes
without having its memory wiped, the more
cluttered its memory becomes.

Previously text was plotted temporally, and the
semantic web bore too much brunt in extracting
relevant information

- sentence 0: Boston is a city
- sentence 1: Boston is in Massachusetts
- sentence 2: Brighton is in Massachusetts

```
def dist(a,b):  
    thesaurus.path_length(a,b)  
  
def parse(sentence):  
    sentence.extract( subject, verb, object)
```
